Student Name:	Section:	Date:

Activity 1 Web Application Development

Instructions/Directions:

As a developer, your team is tasked to develop a small-medium business enterprise web application (eCommerce, Inventory System, Information System or Thesis/Capstone-related Projects) that will make use of database with some basic CRUD functionalities. Use preferably the ff. web development tools (Visual Studio Code, NodeJS) that complies with the MERN Stack framework.

Show proof of your activity completion by providing clear screenshot of your entire desktop environment based on the tasks performed. Screenshot must be included in the activity template provided in MS Teams Assignment.

Submission Note (Individual Activity)
Use the Activity template attached in MS Teams Assignment.
Use file name convention (LASTNAME_CTINASSL_SECTION_TERM_AY_Activity1.pdf).
Submit a PRINTED document and upload the Softcopy (PDF file) in MS Teams

Database Development

display here the database management dashboard that contains the created tables for the web application.

Web Application User Interface

Display here all the User Interface design (actual) of the developed web application.

Criteria	Activity Rubrics					Points
	Not Attempted (0 points)	Beginning (1 point)	Developing (2 points)	Proficient (3 points)	Exemplary (4 points)	
Functionality	CRUD operations implementation not attempted.	CRUD operations are incomplete or non-functional.	Some CRUD operations work; significant issues.	Most CRUD operations work correctly; minor issues.	All CRUD operations work flawlessly across the application.	
User Interface (UI) Design/User Experience (UX)	UI Design creation not attempted.	Poorly designed UI; confusing or unresponsive. Poor usability; navigation and instructions unclear.	Basic UI; lacks consistency or has some usability issues. System usability is fair; navigation is sometimes confusing.	Generally good UI; minor inconsistencies or responsiveness issues. System is mostly easy to use; minor navigation issues.	Intuitive, visually appealing, consistent, and responsive UI. System is easy to use, with clear navigation and instructions.	
Database Integration	Database Integration not attempted.	Poor database design; relationships and data types incorrect.	Database design has issues; some relationships or data types incorrect.	Database mostly correct; minor relationship/data type issues.	Database designed well; relationships and data types are optimal.	
Testing and Debugging	Testing and Debugging not attempted.	Minimal testing; significant bugs present.	Partially tested; some bugs remain.	Mostly tested; minor bugs that were resolved.	Thoroughly tested with no errors or bugs present.	
Documentation	No documentation provided.	Documentation attempted but incomplete or unclear.	Documentation provided but lacking in significant areas.	Documentation provided but with minor omissions.	Comprehensive and clear documentation provided for all configurations.	

Total Score and Feedback				
☐ Exemplary	20	The criterion is fully met with exceptional quality and no issues.	**TOTAL POINTS EARNED**	
☐ Proficient	16-19	The criterion is mostly met, with minor issues that do not affect core functionality.		
☐ Developing	12-15	The criterion is partially met, with significant issues affecting functionality or usability.		
☐ Beginning	8-11	The criterion is not met or has major issues affecting overall performance.		
☐ Not Attempted	0-7	Little to no understanding demonstrated.
